

# CYBER PROTECTION THAT GOES BEYOND YOUR POLICY

At Tokio Marine HCC – Cyber & Professional Lines Group, we prioritize partnering with industry-leading vendors to ensure your clients receive the strongest support in today's fast-moving cyber landscape. Premier protection goes beyond coverage—it includes preparedness.

## Enhancing Preparedness at No Extra Cost

As part of our cyber insurance offering, we provide eligible policyholders with a complimentary tabletop exercise designed to strengthen ransomware readiness. This exclusive benefit is offered at no additional cost to clients who meet qualifying premium levels:

- All risks \$250M+ revenues
- Brokers can request this service for policies of \$50,000 or more in premium for no additional charge.

## Our Approach

Our tabletop exercises recreate ransomware and data security incidents in a realistic, pressure-tested environment. Each exercise is tailored to the client's industry and operational landscape and includes key personnel—from executives to IT teams—working together to practice decision-making and coordination, gaining firsthand experience in managing a cyber crisis. The goal is to test key elements of the client's incident response plan and improve their preparedness by providing guidance on how to respond to a ransomware incident, incorporating considerations from applicable law.

## Why You Should Consider Adding This Feature:

- Protects the Bottom Line – A tabletop exercise helps prevent costly mistakes during a real cyberattack by ensuring faster, more effective responses that minimize downtime, financial loss, and reputational damage.
- Strengthens Crisis Readiness – Ensures your leadership and staff know their roles, make faster decisions, and work in sync when every second counts.
- Reveals Hidden Vulnerabilities – Exercises exposure gaps in security, communication, and procedures before an attacker can exploit them, giving your company a chance to fix weaknesses proactively.
